Accommodation
A contingent of rooms will be available in hotels near the venue and the city of Stuttgart. You will find more information on the website soon.

Sponsors
Interested companies will have the opportunity to present their products and services in the conference proceedings and at the venue. Please contact us.
Many changes are made creating the future energy generation. More challenging and detailed questions arise regarding mainly sustainability, safety, maintenance and reliability of conventional and nuclear plants. The focus lies on the usage of resources, renewable energy as well as optimized storage systems. Key issues to challenges are related to materials as well as structural and lifetime assessments. The seminar is dedicated to contribute to these questions. Special emphasis lies on new manufacturing technologies. Especially additive manufacturing offers new possibilities for design, use of resources and optimized material behavior. However, it also creates new challenges in the combination of process control and materials qualification.

A plenary session with invited lecturers is intended to give overviews and different sights on the above-mentioned topics and thus to introduce the technical sessions of the seminar. A special session is dedicated to the advanced research work at MPA Stuttgart.
