Materials Testing Institute, University of Stuttgart
Pfaffenwaldring 4
70569 Stuttgart
Prof. Dr.-Ing. H. Garrecht
Phone: +49(0)711 685 63323
Fax: +49(0)711 685 67681
E-mail: harald.garrecht@mpa.uni-stuttgart.de

Dipl.-Ing. Ch. Laskowski
Dept. Mineral Building Materials
Phone: +49(0)711 685 68252
Fax: +49(0)711 685 66828
E-mail: christina.laskowski@mpa.uni-stuttgart.de

Dr. rer. nat. F. Grüner
Dept. Durability and Protection of Buildings and Plants
Phone: +49(0)711 685 66750
Fax: +49(0)711 685 66797
E-mail: friedrich.gruener@mpa.uni-stuttgart.de

Dr.-Ing. D. Lotze
Dept. Building Construction and Component Testing
Phone: +49(0)711 685 63585
Fax: +49(0)711 685 66827
E-mail: dieter.lotze@mpa.uni-stuttgart.de

Dipl.-Ing. S. Gerber
Dept. Calibration / Construction Products / Construction supervision
Phone: +49(0)711 685 62557
Fax: +49(0)711 685 63070
E-mail: siegfried.gerber@mpa.uni-stuttgart.de

Supervision, Certification
- Third-party supervision and certification of structural bearings for bridges according to European and national standards
- Control checks according to ZTV Beton-STB
- Supervision center for concrete (DIN 1045-3 and ZTV-ING)
- Surveillance and approval of anchors for prestressing tendons
- Surveillance and certification of bridge sealing systems on concrete and steel (EN 14695, ZTV-ING: TL-BEL-ST, TL-BEL-EP)
- Surveillance according to ZTV KOR-steel-structures

Services
- Examination of reinforced and prestressed concrete structures regarding corrosion
- Nondestructive assessment of structural and survey of reinforced and prestressed concrete structures
- Magnetic leakage flux measurement for detection of fractures (prestressing steel)
- Half cell potential mapping for nondestructive detection of corroding reinforcement
- Electromagnetic methods for the detection and localization of rebars and determination of concrete cover
- Acoustic methods (impact echo, ultrasonic techniques) for detection of voids, defects, wall thickness
- Development and application of sensor networks for monitoring strain, deformation, temperature, moisture, vibration
- Assessment of susceptibility of prestressing steels to stress corrosion cracking
- Corrosion testing on metallic and organic coatings
- Electrochemical corrosion testing
- Corrosion monitoring
- Mechanical testing of reinforcing and prestressing steel
- Mechanical testing of concrete members
- Analysis and assessment of concrete and concrete components (freeze–thawing cycles, deicing salt, ASR, chemical attack)
- Basic research and proof of usability of materials and components for sliding parts and bearings in civil engineering
- Verification of load bearing capacity of foundation piles and anchors (in cooperation with partner IGS)
- Loading tests of bridges and structures
- Testing the durability of concrete (freeze–thawing cycles, deicing salt, ASR, chemical attack, air void characteristics, chloride penetration resistance)
- Mechanical strength testing of concrete (elastic modulus, flexural/compressive strength, creepage)

Examination of longitudinal prestressing tendons in a bridge by means of magnetic leakage flux measurement, and fracture signal

Responsible Units for traffic infrastructure services

- Unit Metal Construction, Welding Technology
- Unit Plastics, Coatings and Bitumen
- Unit Concrete Technology
- Unit Bearing and Expansion Joints in Structural Engineering
- Unit Non-Destructive Testing and Building Monitoring - Unit Corrosion, Corrosion Protection

Examination of reinforced and prestressed concrete structures regarding corrosion

Institute for Geotechnical Engineering
